

CAPE COMPUTER SCIENCE UNIT ONE (1) - UNIT PLAN 2023-2024

UNIT TITLE: Problem Solving with Computers

GRADE/ LEVEL: Twelve (12)

DURATION: Four (4) Weeks

OVERVIEW: On completion of this module, students should: understand the problem-solving process; appreciate the role and importance of algorithms in the problem-solving process; understand the process of developing algorithms

SPECIFIC OBJECTIVES	SUB-TOPIC(S)	MAJOR CONCEPTS	TEACHING STRATEGIES	LEARNING ACTIVITIES	EVALUATION	RESOURCES	WK
<p>Students should:</p> <p>0. Understand the Requirements of the Syllabus and the Internal Assessment</p>	<p>Syllabus Content Overview and delivery sequence</p> <p>IA Mark scheme Overview</p>	<ul style="list-style-type: none"> • Module 2: Problem-Solving with Computers • Module 3: Programming • Module 1: Computer Organization • Definition of the Problems • Narrative and Flow Charts or Pseudocode • Coding of Program • Testing and presentation • Communication of Information 				<p>Computer, Presentation slides and syllabus.</p>	<p align="center">1</p>

<p>1. Explain the concept of problem solving</p> <p>2. Describe the stages in the problem-solving process</p>	<p>Problem-solving process.</p> <p>Stages of the Problem solving process</p>	<p>Problem Solving definition</p> <ul style="list-style-type: none"> • Problem definition. • Problem analysis. • Identify and evaluate possible solutions • Select and justify optimal solutions • Implementation and review. 	<ul style="list-style-type: none"> ✓ Cooperative learning ✓ Case Method 	<ul style="list-style-type: none"> • Students will be given a step of the problem solving process in groups to explain. 		<p>Laptop, computer, slides, syllabus and textbook</p>	<p>1</p>
<p>3. Explain the concept of an algorithm.</p> <p>4. Identify the necessary properties of algorithms that are well designed.</p> <p>5. Identify ways of representing algorithms</p>	<p>Algorithms</p> <p>Properties of a well designed algorithm</p> <p>Ways of representing algorithms</p>	<p>Algorithm Definition.</p> <ul style="list-style-type: none"> • A general solution to the problem • Clearly defined and unambiguous steps. • Finite number of steps. • Flow of control from one process to the next. <p>Narrative, Flowchart & Pseudocode</p>	<ul style="list-style-type: none"> ✓ Cooperative learning ✓ Discussion 	<ul style="list-style-type: none"> • Students will research the Properties of a well-designed algorithm for discussion. • Students will be given algorithms represented in the 3 ways for them to make comparisons, identifying some constructs are represented. 	<p>Verbal Recap</p>	<p>Laptop, computer, slides, syllabus and textbook</p>	<p>1</p>

<p>6. Explain constructs used in structured programming</p>	<p>Constructs used in structured programming</p>	<ul style="list-style-type: none"> • Input and Output statements • Control Structures: <ul style="list-style-type: none"> ○ Sequence ○ Selection ○ Iteration or repetition (bounded and unbounded) 	<ul style="list-style-type: none"> ✓ Cooperative learning ✓ Case Method 	<ul style="list-style-type: none"> • Students will use control structures in the creation of algorithms in groups. 	<p>Students will review their algorithms with the aid of the teacher.</p>	<p>Laptop, computer, slides, syllabus and textbook</p>	<p>2</p>
<p>7. Interpret algorithms from case problems.</p> <p>8. Correct algorithms from case problems.</p>	<p>Tracing/Algorithm Review</p>	<p>Determination of output and correctness of a given algorithm</p> <p>Determine whether an algorithm achieves its stated objective and if not provide a correct algorithm</p>	<ul style="list-style-type: none"> ✓ Cooperative learning ✓ Case Method 	<ul style="list-style-type: none"> • Students will be given algorithms to trace. • Students will analyse and fix incorrect algorithms. 	<p>Class review of trace tables</p> <p>Students will review each other's work.</p>	<p>Laptop, computer, slides, syllabus and textbook</p>	<p>3</p>
<p>9. Develop algorithms from case problems.</p> <p>10. Explain the need for developing the logic of a computer program.</p>	<p>Algorithm Development</p>	<p>Algorithms as logically sequenced instructions.</p>	<ul style="list-style-type: none"> ✓ Cooperative learning ✓ Case Method 	<ul style="list-style-type: none"> • Discussion • Students will analyze the steps algorithms and determine correctness. • Students will explain the need for algorithms 		<p>Laptop, computer, slides, syllabus and textbook</p>	<p>4</p>

UNIT TITLE: Programming

GRADE/ LEVEL: Twelve (12)

DURATION: Nine (9) Weeks

OVERVIEW: On completion of this module students should: appreciate the need for different programming languages and program translation; develop the ability to implement solution to problems using programming language.

SPECIFIC OBJECTIVES	SUB-TOPIC(S)	MAJOR CONCEPTS	TEACHING STRATEGIES	LEARNING ACTIVITIES	EVALUATION	RESOURCES	WK
Students should: 1. Identify the characteristics of different programming paradigms.	Characteristics of different programming paradigms.	<ul style="list-style-type: none"> • Procedural or Imperative • Object-oriented • Functional • Declarative. 	<ul style="list-style-type: none"> ✓ Discussion ✓ Cooperative learning 	Students will be grouped where they will be required to research characteristics of the different programming paradigms etc. for discussion.	Informal	Laptop, computer, slides, syllabus and textbook	5
2. Explain the need for different programming languages	Programming Languages	Appropriateness to applications (web application, games, formula translation, application for mobile devices)	<ul style="list-style-type: none"> ✓ Discussion ✓ Cooperative learning 	Students will explore content of the topic in both video and written.	Students will be required to write a short essay explaining the need for different programming languages.	Laptop, computer, slides, syllabus and textbook	5
SIX WEEK TEST							
3. Explain how Assemblers, Compilers and Virtual machines and interpreters are involved in the execution of High-level programming languages.	Program Translation	Stages in the translation process: <ul style="list-style-type: none"> • Lexical analysis • Syntax analysis • Semantic analysis • Intermediate code generation • Code optimization • Code generation. 	<ul style="list-style-type: none"> ✓ Discussion ✓ Cooperative learning 	Students will discuss the different stages of the translation process.	Students will state the deliverables of each stage of the translation process.	Laptop, computer, slides, syllabus and textbook	6

	Programming Language Translators	Assemblers, Compiler Role of preprocessors; linkers.					
4. Assign variables to declared variables	Variable declaration and assignment	<ul style="list-style-type: none"> • Appropriate variable names. • Data types (Integer, float, double and char, char []) • Variable naming conventions 	<ul style="list-style-type: none"> ✓ Discussion ✓ Cooperative learning ✓ Demonstration 	Students will declare proper variables to be used in their algorithms.		Laptop, computer, slides, syllabus and textbook	7
5. Using input and output statements	Input and Output Statements	Inputting data to variables, Output data from variables, print headings.		Students will research and share amongst classmates how to input and output data to and from variables.			
6. Develop good programming style	Good programming practices	Proper spacing (white spaces), indentation and comments		Students will be required to add comments to their programs.			
7. Choose appropriate conditional and iterative constructs	Conditional and Iterative Constructs	<p>Conditional</p> <ul style="list-style-type: none"> • If Construct • If-then-Else Construct • Nested-If Constructs <p>Iterative</p> <ul style="list-style-type: none"> • While • Do-While • For 	<ul style="list-style-type: none"> ✓ Demonstration ✓ Cooperative Learning 	Students will be given a chance to analyze a problem and decide which construct best suits the problem.		Laptop, computer, slides, syllabus and textbook	7
8. Use Conditional and Iterative Constructs				Students will implement solutions to problems utilizing conditional and iterative			

				constructs.			
9. Use arrays in programs	Arrays	<ul style="list-style-type: none"> • Read data into arrays • Output data from arrays 	<ul style="list-style-type: none"> ✓ Demonstration ✓ Cooperative Learning 	Students will write simple C programs to perform	Students will test the correctness of their programs	Laptop, computer, slides, syllabus and textbook	8

		<ul style="list-style-type: none"> • Manipulate or modify data in arrays. • Character Arrays (String) 	<ul style="list-style-type: none"> ✓ Case Studies 	basic functions with an array.	through the use of test data.		
10. Apply the techniques of structured decomposition to reorganize a program into smaller pieces	Functions	Write simple and clear functions;	<ul style="list-style-type: none"> ✓ Cooperative Learning ✓ Case Studies 	Students will work collaboratively to decompose given problems into functions.		Laptop, computer, slides, syllabus and textbook	9
11. Implement Algorithms to solve a given problem	Algorithm Implementation	<ul style="list-style-type: none"> • Write test and debug programs • Use of range tests and desk checks • Code debugging strategies (trace tables, watches) 	<ul style="list-style-type: none"> ✓ Demonstration ✓ Cooperative Learning 	Students will be given erroneous programs/modules and asked to debug them.	Students will fix incorrect code given to them in a PowerPoint /Worksheet	Laptop, computer, slides, syllabus and textbook	10
12. Use records as a means of grouping related information.	Records	The concept of a Struct in C	<ul style="list-style-type: none"> ✓ Demonstration ✓ Cooperative Learning 	Students will work collaboratively to find various entities that can be represented as a struct.	Students will be given entities for which they will have to develop suitable structs.	Laptop, computer, slides, syllabus and textbook	11
13. Use text files to store data and records	Files	File Operations: Open, close, read, write, append.	<ul style="list-style-type: none"> ✓ Demonstration ✓ Cooperative Learning 	Students will work collaboratively after given adequate examples to add modules to perform file	Students will be required to prove correctness of their modules	Laptop, computer, slides, syllabus and textbook	12 & 13

				operations to their programs.	by testing them.		
SIX WEEK TEST
